Simple Container Creation

Sanjana Sudarshan Jetstream - Indiana University SC21 - Nov 15, 2021

Docker

```
$ docker --version
Docker version 20.10.2, build 64e9980/1.13.1
```

```
$ docker run hello-world
Unable to find image 'hello-world:latest' locally
Trying to pull repository docker.io/library/hello-world ...
latest: Pulling from docker.io/library/hello-world
0e03bdcc26d7: Pull complete
Digest:
sha256:6a65f928fb91fcfbc963f7aa6d57c8eeb426ad9a20c7ee045538ef34847f44f1
Status: Downloaded newer image for docker.io/hello-world:latest
```

Running a container from prebuilt image

Run a container from Alpine Linux

```
$ docker run alpine ls -l
Unable to find image 'alpine: latest' locally
Trying to pull repository docker.io/library/alpine ...
latest: Pulling from docker.io/library/alpine
df20fa9351a1: Pull complete
Digest: sha256:185518070891758909c9f839cf4ca393ee977ac378609f700f60a771a2dfe321
Status: Downloaded newer image for docker.io/alpine:latest
total 8
drwxr-xr-x 2 root
                                      4096 May 29 14:20 bin
                    root
                                       340 Jun 2 15:11 dev
drwxr-xr-x 5 root
                        root
                                        66 Jun 2 15:11 etc
drwxr-xr-x 1 root
                        root
```

Running a container from prebuilt image

\$ docker images

REPOSITORY TAG IMAGE ID CREATED SIZE docker.io/alpine latest a24bb4013296 3 days ago 5.57 MB docker.io/hello-world latest bf756fb1ae65 5 months ago 13.3 kB

\$ docker run alpine echo "Hello world"

Hello world

\$ docker ps

CONTAINER ID IMAGE COMMAND CREATED STATUS

\$ docker ps --all

CONTAINER ID IMAGE COMMAND CREATED STATUS

b61702e8cf09 alpine "echo 'Hello world'" 32 seconds ago Exited (0) 31 seconds ago

Build a Docker Image Odd / Even

- app.py
- Dockerfile

```
$ cd ~ && mkdir simple-script && cd simple-script
```

Create a file named app.py with the following content

```
# Python program to check if the input number is odd or even
num = int(input("Enter a number: "))
if (num % 2) == 0:
  print("{0} is Even".format(num))
else:
  print("{0} is Odd".format(num))
```

Build a Docker Image

Create a file called Dockerfile in the simple-script directory

```
# our base image
FROM alpine:3.9

# install python and pip
RUN apk add --update py3-pip

# copy files required for the app to run
COPY app.py /usr/src/app/

# run the application
CMD ["python3" , "/usr/src/app/app.py"]
```

```
$ docker build -t $YOUR DOCKERHUB USERNAME/simple-script .
sudo docker build -t sanjanasudarshan/simple-script.
Sending build context to Docker daemon 3.072kB
Step 1/4: FROM alpine:3.9
3.9: Pulling from library/alpine
Step 2/4: RUN apk add --update py3-pip
---> Running in ead201b4a5a9
fetch http://dl-cdn.alpinelinux.org/alpine/v3.9/main/x86 64/APKINDEX.tar.gz
fetch http://dl-cdn.alpinelinux.org/alpine/v3.9/community/x86 64/APKINDEX.tar.gz
(1/11) Installing libbz2 (1.0.6-r7)
(11/11) Installing python3 (3.6.9-r2)
Step 3/4 : COPY my script.py /usr/src/app/
---> 3c12a3940c4d
Step 4/4 : CMD ["python3" "/usr/src/app/my script.py"
---> Running in f84bfd09474a
Removing intermediate container f84bfd09474a
---> 514dbb79d853
Successfully built 514dbb79d853
Successfully tagged sanjanasudarshan/simple-script:latest
$ docker run -i $YOUR DOCKERHUB USERNAME/simple-script
```

Enter a number: 5

5 is Odd

Build a Docker Image Dice Roll

- diceroll.py
- Dockerfile

\$ cd ~ && mkdir dice-script && cd dice-script

Create a file named diceroll.py with the following content

```
import random
min = 1
max = 6

roll_again = "yes"

while roll_again == "yes" or roll_again == "y":
    print "Rolling the dices..."
    print "The values are...."
    print random.randint(min, max)
    print random.randint(min, max)
roll again = raw input("Roll the dices again?")
```

Dockerfile

```
# our base image
FROM alpine:3.9

# install python and pip
RUN apk add --update py3-pip

# copy files required for the app to run
COPY diceroll.py /usr/src/app/

# run the application
CMD ["python3" , "/usr/src/app/diceroll.py"]
```

Build a Docker Image

Jupyter Notebook

\$ docker search jupyter

INDEX	NAME
docker.io	docker.io/jupyter/datascience-notebook
docker.io	docker.io/jupyter/all-spark-notebook
docker.io	docker.io/jupyterhub/jupyterhub
docker.io	docker.io/jupyter/scipy-notebook

\$ cd ~ && mkdir mynotebook && cd mynotebook

model.py

def introduce(name):
 return 'Hello ' + name

DESCRIPTION

Jupyter Notebook Data Science Stack from h... Jupyter Notebook Python, Scala, R, Spark, ... JupyterHub: multi-user Jupyter notebook se... Jupyter Notebook Scientific Python Stack f...

Dockerfile

our base image

FROM jupyter/minimal-notebook

copy files required for the model to work COPY model.py /home/jovyan/work/

tell the port number the container should expose EXPOSE 8888

\$ docker build -t \$YOUR_DOCKERHUB_USERNAME /mynotebook .

```
Step 1/3: FROM jupyter/minimal-notebook
Trying to pull repository docker.io/jupyter/minimal-notebook ...
latest: Pulling from docker.io/jupyter/minimal-notebook
Status: Downloaded newer image for docker.io/jupyter/minimal-notebook:latest
---> b61382e30c1d
Step 2/3: COPY model.py /home/jovyan/work/
---> 961a469fb881
Removing intermediate container 7a2ba5ef7f8c
Step 3/3: EXPOSE 8888
---> Running in a4cd0615b004
---> f1c18e7b1fac
Removing intermediate container a4cd0615b004
Successfully built f1c18e7b1fac
```

```
$ docker images
```
